EDUCATION

Koneru Lakshmaiah University

B.Tech in Artificial Intelligence and Data Science ; CGPA:9.08 (Till date)

Vijayawada, Andhra Pradesh, India

2023 - 2027

Sri Chaitanya Junior College

Intermediate; Percentage: 89.3%

Vijayawada, Andhra Pradesh, India

2021 - 2023

Sri Chaitanya School

Secondary School (Class X); Percentage: 100%

Jaggampeta, Andhra Pradesh, India

2021

SKILLS SUMMARY

Languages:

Python, SQL

Libraries:

NumPy, Pandas, Scikit-learn, TensorFlow

Tools:

Jupyter Notebook, Google Colab, Git, Github

Core Computer Science:

Object-Oriented Programming, DBMS

Artificial Intelligence:

AI, Machine Learning, Deep Learning, NLP

PROJECTS

Titanic Survival Prediction — Machine Learning

Jan-Mar 2025

- Developed a Titanic Survival Prediction model using Logistic Regression and Random Forest classifiers.
- Performed data preprocessing, including missing value imputation, feature encoding, scaling, and transformation using Scikit-learn's ColumnTransformer.
- Optimized model performance using GridSearchCV with 5-fold cross-validation, achieving approximately 84 percent cross-validation accuracy.
- Evaluated and compared multiple models to identify the best-performing algorithm for passenger survival prediction

CNN-Based Cat and Dog Image Classification — Deep Learning

Jan-Mar 2025

- Developed a CNN-based cat and dog image classifier using TensorFlow/Keras.
- Applied data augmentation techniques to improve model generalization and reduce overfitting.
- Trained and evaluated the model using training and validation datasets, monitoring performance metrics throughout the process.
- Visualized training and validation accuracy/loss curves to analyze model learning behavior and performance.
- Saved and exported the trained model for future inference and deployment.

Movie Recommendation System — Natural Language Processing

Mar-Apr 2026

- Designed and developed a content-based movie recommendation system using Count Vectorizer and Cosine Similarity to recommend similar movies from a dataset of over 5000 titles.
- Combined movie attributes such as genres, keywords, cast, and crew information to generate accurate and relevant movie recommendations.
- Built an interactive Streamlit-based interface that enables users to obtain personalized movie recommendations through a simple and intuitive workflow.
- Managed the project end-to-end, including data preprocessing, recommendation logic implementation, user interface development, and source code version control using GitHub.

CERTIFICATIONS

Data Analysis with Python — **CERTIFICATE**

Jul-Sep 2025

- Learned data cleaning, preprocessing, and analysis using Python, NumPy, and Pandas.
- Created data visualizations with Matplotlib to identify trends and extract insights.

Data Science Master Virtual Internship — **CERTIFICATE**

Aug-Oct 2024

- Gained hands-on experience in data preprocessing, machine learning workflows, and data analysis.
- Applied data science concepts to solve practical problems through project-based learning.

KEY STRENGTHS

- Strong problem-solving, Team collaboration, Effective communication, Adaptability to new technologies, Ownership and accountability, Innovative thinking, Logical reasoning, Time management
